

# PRESS RELEASE

NASDAQ OTCBB: SFMI.PK

## SILVER FALCON MINING (SFMI) RELEASES ADDITIONAL INFORMATION FROM HISTORICAL DRILLING RESULTS.

**New York, NY -- (MARKET WIRE) – 04/23/09 --** Silver Falcon Mining, Inc. (OTCBB:[SFMI.PK](#) - [News](#)) again released information from another historical report written in 1998. This recap on historical drilling results determined extremely high grade gold intercepts between the Poorman Mine's north and south shafts.

Donald W. Tully, P. Engineer on April 14, 1998 recapped the drilling report as follows:

"The Drilling Program was done with a large rotary down-hole-hammer drilling machine which was capable of drilling both vertical and angle holes. Samples were taken at five foot intervals. Five angle holes, totaling 2,245 feet, were drilled in the *Oro Fino* area. Two angle holes, totaling 1,025 feet were drilled in the *Keystone/Illinois Central* area. Three vertical holes, totaling 685 feet were drilled in the *Cow Cornice Basin* area. This was a limited exploratory program. The two holes that were drilled in the *Keystone/Illinois Central* and *North Empire* zones of the *Central Vein System* on the Mountain, approximately midway between the North and South shafts of the *Poorman Mine*, struck extremely strong new vein structures. These structures showed 1,000 ppm in Gold (23.86 oz Gold / Ton). Obviously, connecting the *Sinker Tunnel to the Poorman Mine, thru this particular area, may yield unexpected results.*"

Management cautions that this report is over 10 years old but once again believes that War Eagle Mountain contains numerous high-grade ore bearing zones.

Pierre Quilliam, President, states, "This report was contained in numerous piles of files after acquiring the Sinker Tunnel claims. This information contains an extraordinary and exciting gold bearing 'hot-zone' within the Poorman claim."

He further states, "Because this gold/ton figure appears to be extremely rich in geological terms, SFMI will conduct its own drill program to reconfirm the grades contained within this area."

Even though this report is historical, it does provide the Company's geologist with information, a template, as they move forward [with an exploration/developmental mine plans](#).
